Nteligen, LLC, is Raising the Bar in Cybersecurity

Executive Order emphasizes the importance of cross domain solutions that are the focus of Nteligen's expertise.

COLUMBIA, MD, January 21, 2022 – On January 19, 2022, the White House issued National Security Memorandum/NSM-8 that defines increased cybersecurity measures for National Security Systems (NSS). For more than 12 years, Nteligen, LLC, has been helping corporations globally and US federal agencies raise the bar in cybersecurity standards for NSS.

Included in the Memorandum is a National Manager Directive regarding Cross Domain Solutions (CDS) which secure the movement and sharing of information across security boundaries. NSM-8 establishes Raise-The-Bar (RTB) as a national standard for increasing CDS security and function, of which Nteligen has been a key contributor in the development of RTB since its inception. According to John Spicer, Nteligen's VP of Technical Strategy, "in the face of endless nation state cyber attacks, RTB defines a new level of cybersecurity requirements that enable inter-agency information sharing while protecting their sensitive infrastructures."

Joseph Karolchik, Nteligen President, states, "As specialists in cyber security, we apply a proven framework that looks at the world radically different from others. We assume you will be compromised. Our assumption requires a different way of thinking about your cyber strategy. This is exactly what NSM-8 is all about. Helping the Government maintain a proactive stance against coordinated attacks."

As an expert resource in the information sharing community, Nteligen has been directly involved in the development of seven different CDS systems for various Government and Commercial customers. Nteligen is often called upon by developers of cybersecurity solutions to provide secure architecture development, to conduct software assessments and to clarify the applicability of RTB requirements to their solutions prior to submission of those systems to the national labs for accreditation.

About Nteligen, LLC

Nteligen, founded in 2010, is based out of Columbia, Maryland. Its products and services help its customers engineer resilience throughout the enterprise. As specialists in cyber security, Nteligen applies a proven framework called Proactive Cyber Threat Mitigation that is both offensive and defensive. Products and services include secure information sharing, data risk mitigation, cyber thought leadership, resilient software engineering, and cyber/organizational strategies. Multiple federal agencies and international corporations trust Nteligen to keep their systems and processes resilient.
